Notes: Disaggregated entitlement trade data in QLD is not publicly available therefore Aither has been unable to provide data in the same format as SA, Vic and NSW entitlement types. QLD groundwater trade data relates to trade in April 2018 as more recent trade data was unavailable at the time of publication. Trade related to QLD Border rivers unsupplemented trade reflects year to date trade as monthly trade data was unavailable. In instances where there has been more than one trade for a given month it has not been possible to determine a maximum price due to the nature of the data made available.

Notes

VWAPs are based on estimates of commercial trades as outlined in Aither’s methodology excluding $0 values. Aither’s methodology is available on request.

Only trades reported in July 2018 are included in the monthly Volume Weight Average Price (VWAP) and Maximum Monthly Price ($/ML) reported in the entitlement summary tables.

The ‘Number of Transfers and ‘Volume of Transfers’ (ML) are calculated based on all trades from state water market registers, including $0 value trades. This is in line with Aither’s calculation methodology which is available on request.

The average parcel size reported in the entitlement summary tables has been determined by taking the total monthly volume of transfers and dividing by the total number of transfers of the given entitlement during the month in question.

As trade prices for NSW Murray GS within Murray Irrigation are not reported, Aither has used NSW Murray GS on river prices as a substitute given the common characteristics that these entitlements share.
