Independent Observer summary report on *MV Bahijah*

Cattle exported to Israel in August 2023

May 2024

Voyage summary

Livestock: 5,499 cattle

Vessel: *MV Bahijah*

Loading location: Fremantle

Discharge location: Eilat, Israel

Voyage length: 20 days

Independent Observer: Boarded at Fremantle and remained onboard until completion of discharge.

Voyage mortality rate: 0.02% (1 mortality). This mortality is unlikely to be linked to any systemic failure by the exporter.

Notifiable mortality rate: 0.5% for cattle.

Summary of observations

This report summarises key observations of the implementation and effectiveness of exporter arrangements to ensure the health and welfare of livestock. The report has been approved by the observer who accompanied the voyage.

Exporter documentation

The observer reported no issues regarding exporter documentation.

Loading

Based on observations made during this voyage, the exporter arrangements relating to loading were appropriate and effective in managing livestock health and welfare.

Personnel

Based on observations made during this voyage, the exporter arrangements relating to personnel were appropriate and effective in managing livestock health and welfare.

Daily routine

Based on observations made during this voyage, the exporter arrangements relating to daily routine were appropriate and effective in managing livestock health and welfare.

Feed and water

Based on observations made during this voyage, the exporter arrangements relating to feed and water were appropriate and effective in managing livestock health and welfare.

Ventilation

Based on observations made during this voyage, the exporter arrangements relating to ventilation were appropriate and effective in managing livestock health and welfare.

There were no livestock observed as heat stressed. There were no health or welfare impacts observed due to the temperatures on livestock decks for the duration of the voyage.

Pen conditions

The observer noted that:

- 1) At least three temporary pens on each of Decks 5, 6 and 7 included in the stowage plan were not assembled at commencement of loading and hence were not available to receive livestock. In total 9 pens were not utilised during the voyage, and 2 pens were underutilised as per the vessel stowage plan. This resulted in less pen space allocation than required by the Australian Standards for the Export of Livestock (ASEL). No direct effects on animal health were noted because of the failure to assemble the temporary pens and subsequent overstocking.
- 2) The observer noted that there was room for rest, movement and access to feed and water, with no animal welfare issues identified.

Health and welfare

No systemic issues observed.

Discharge

Based on observations made during this voyage, the exporter arrangements relating to discharge were appropriate and effective in managing livestock health and welfare.

Representative photographs of voyage

Day 6 Cattle in pen — no issues identified

Day 8 Cattle in pen — no issues identified

Day 8 Cattle feeding — no issues identified

Day 10 Cattle in pen — no issues identified

Day 18 Cattle in overstocked pen — no issues identified

Day 19 Cattle in pen — no issues identified

Acknowledgement of Country

We acknowledge the Traditional Custodians of Australia and their continuing connection to land and sea, waters, environment and community. We pay our respects to the Traditional Custodians of the lands we live and work on, their culture, and their Elders past and present.
