DRAFT

August 2003

QUARANTINE REQUIREMENTS FOR THE IMPORTATION OF ZOO PERISSODACTYLS FROM SINGAPORE

Scope

These requirements apply to the importation of perissodactyls including rhinoceros, tapirs, zebras, Przewalski's horses and other non-domesticated equidae from Singapore.

Documentation

- A copy of a valid Permit to Import issued by the Australian Quarantine and Inspection 1) Service (AQIS) must accompany each consignment. Further information may be obtained from the Australian Government Department of Agriculture, Fisheries and Forestry website www.affa.gov.au under Quarantine and export Services – Animals, or by Email to animalimp@aqis.gov.au . A fee will be charged for the Permit.
- 2) The animal/s must be accompanied by a copy of an Environment Australia (EA) permit and appropriate CITES (Convention on International Trade in Endangered Species of Wild Fauna and Flora) documentation from the exporting country. Details are available from the Director, Sustainable Wildlife Industries, EA – Email wildlifetrade@ea.gov.au or the EA website: http://www.ea.gov.au/biodiversity/trade-use.
- 3) The animal/s must be accompanied by an *international veterinary certificate*. The certificate should be in the format of an OIE (Office International des Epizooties) Model International Veterinary Certificate for live animals and must give details of:
- the identification of each animal including microchip number and site of implantation (rather than ear mark), species, sex and age;
- name and address of exporter and zoo or wildlife park of origin;
- name and address of consignee;
- nature and identification of means of transport.

The veterinary certificate must be in English and be signed by an Official Veterinarian* of the country of export who must certify that:

- the premises of origin is a government registered or licensed zoo or wildlife park approved a) for the holding of non-domesticated animals;
- each animal for export has been continuously resident in the premises of origin for at least 12 months prior to certification or since birth;
- c) the premises of origin is under veterinary supervision, and a suitable health monitoring programme, including microbiological and parasitological tests and necropsies, is implemented;

ABN 24 113 085 695

- d) no case of African horse sickness, equine influenza, Rift Valley fever, Venezuelan equine encephalomyelitis or vesicular stomatitis has been reported in Singapore during the past 12 months;
- e) no case of Borna disease, dourine, epizootic lymphangitis, equine piroplasmosis, glanders, heartwater, horse pox or trypanosomosis (*Trypanosoma evansi*, *T vivax*) has been diagnosed in any animal in the premises of origin during the past 12 months;
- f) no case of equine infectious anaemia, equine viral encephalomyelitis or equine erhlichiosis (*Ehrlichia risticii*, *E equi*) has been diagnosed in the past three months, and no case of bovine tuberculosis during the past 5 years, in any animal at the premises of origin of the same Family as the export animal/s;
- g) the animal/s was/were isolated from other animals not of the same health and residency status for 30 days prior to the scheduled date of export, and remained free from clinical signs of infectious or contagious disease during that period;
- h) each animal has been individually identified with an ISO-compliant FDX-B microchip (transponder), and the site of implantation and the identification number of each animal is recorded on the *veterinary certificate*;
- i) each animal was treated for internal and external parasites (including ticks) with effective broad spectrum parasiticides twice during the 30 days prior to export at an interval of at least 14 days, and the dates of treatment, active ingredients and dose rates used for each animal are recorded in the individual health record attached to the *veterinary certificate*;
- j) he/ she or another *Official Veterinarian* has inspected each animal within 72 hours prior to export and found it to be healthy, free from external parasites and fit to travel;
- k) after due enquiry he /she is satisfied that each animal will be shipped in a container that meets the appropriate container requirements specified in the International Air Transport Association (IATA) Live Animals Regulations.

Note*: An *Official Veterinarian* is a veterinarian authorised by the *Veterinary Administration* of the exporting country to perform animal health and/or public health inspections of commodities and, when appropriate, perform certification in conformity with the provisions of Chapter 1.2. of the OIE International Animal Health Code.

4) Individual health records including details of vaccinations, tests and treatments during the last two years or since the birth of each animal are to be attached to the *veterinary certificate*.

Transport

The animal/s must be consigned directly to Australia. During transport to the port of export, during shipment, and during transport from the port of importation to the post-arrival quarantine facility, the animal/s must have no contact with animals not of the same consignment.

Quarantine

In this section, quarantine means the holding of animals in a place and under conditions specified by AQIS pursuant to the *Quarantine Act* 1908.

Each animal must undergo at least 30 days post-arrival quarantine (PAQ) in a quarantine approved premises (QAP) and be inspected by an AQIS veterinarian and found free from signs of infectious

disease before release from quarantine. During PAQ the animal/s are to be monitored daily for signs of illness and, if necessary, be subjected to a clinical examination. All animals dying are to be subjected to a post-mortem examination to determine the cause of death and AQIS is to be advised.

At the completion of PAQ, the animal/s will be released into premises approved by the appropriate State or Territory Government for holding the imported species, subject to meeting EA and CITES requirements.

While in PAQ the animal/s may be subjected to such tests and/or treatments as are specified by AQIS at the importer's expense. If any animal fails any test or shows evidence of an exotic disease during PAQ, it may be detained in quarantine, exported at the importer's expense or destroyed.

Other requirements

Permission to introduce and keep imported perissodactyls will also be required from the Agency responsible for the regulation of the introduction and keeping of exotic animals in the State or Territory in which the importing institution or premises is located.

Review

These conditions may be reviewed at any time at the discretion of the Director of Animal and Plant Quarantine (Australia).

DAVID BANKS General Manager Animal Biosecurity
